Dear readers,

We are presenting this Interim Statement to you in a screen-optimised layout. The purpose of this is to adapt the document to changes in digital reading and usage habits. Our goal is to make it as simple as possible for you to navigate your way through the Report.

Despite optimising the Report to be read on a screen, we have, of course, made sure that the document can still be printed.

We hope that these changes make it easier for you to read our Annual Report.

Growth trend continues

Another leap in turnover and income

Dear shareholders,

We are pleased to report that the first quarter of 2022 was extraordinarily successful. This development was driven by the continued and strong demand from our existing customers for platform enhancements as well as the signing of a very significant CLOUD4RETAIL contract. We were therefore not only able to seamlessly continue the growth of the previous year, but were able to again significantly increase both turnover and income. In the first quarter, **turnover** increased to EUR 39.82 million, equivalent to a growth of 30.7 percent (Q1 2021 = EUR 30.45 million). As a result, we achieved an **EBITDA** of EUR 9.86 million in the first quarter, exceeding the previous year's quarterly figure by EUR 4.73 million (Q1 2021: EUR 5.13 million). The **operating results (EBIT)** also improved significantly by EUR 4.93 million year-on-year to EUR 8.13 million (Q1 2021: EUR 3.20 million). We therefore achieved an EBIT margin on turnover of 20.4 percent.

Continuing a trend of the last two years, we were able to sign a significant contract with a customer who opted for the CLOUD4RETAIL OmniPOS as early as the 1st quarter of 2022. This means that we have once again succeeded in convincing a major customer to rely on our range of solutions following a global tender. We also have a very well-filled sales pipeline with interesting opportunities for the rest of the year, which makes us

very confident that we will continue to successfully sell our range of solutions.

Although the pandemic has still not subsided, we see little impact on our business operations, especially in the area of customer relations and sales. After having to cancel our attendance at the world's largest retail IT trade fair NRF in New York, trade fairs and events are now regularly taking place again. With Retail Tech in London and EuroCIS in Düsseldorf, which will take place from 31 May, we have been able to exhibit at major trade fairs again for the first time. We expect this to provide lasting new impetus for our sales and to further deepen the relationships with our existing customers.

We also supported our globally-oriented sales and delivery strategy by founding additional national companies. After we launched GK Software Asia Pte. Ltd. in Singapore at the end of last year, GK Software Australia Pty. Ltd. was founded in Melbourne at the beginning of this year. We see these two companies as a base around which we can build our own sales and project capacities as a result of customer orders.

The presentation of our new scanner-less and cashier-less store solution "GK GO" was very well received and we have therefore further intensified our work in these areas. The implementation of the topic of hyper-personalisation as part of GK SPOT was also welcomed by potential customers with whom we are discussing the

topic intensively and will therefore be an important part of the further development of the solution.

We included a medium-term forecast in the Annual Report for 2020, according to which we expect turnover of EUR 160 to 175 million by the end of 2023, with a target EBIT margin of 15 percent. For the current financial year, we still expect the GK Software Group to achieve an increase in revenue from turnover similar to that in the 2021 financial year. In addition, we expect a further slight improvement in the EBIT margin towards achieving the medium-term target for 2023 (15 percent EBIT margin on turnover).

Market environment

As in the previous year, the **prospects for the retail industry** in 2022 are to be evaluated differently according to sector. The current business situation for smaller companies and inner-city clothing retailers continues to be difficult. This is all the more so because some traders are facing supply difficulties, which have been exacerbated by the war in Ukraine. This mainly concerns the areas of sporting goods, electronics, household goods, and textiles. High inflation and the war in Ukraine are also affecting consumer sentiment among the general population. Nevertheless, retail sales have increased by about two percent since the

beginning of the year.¹ Online retail is still considered a growth driver in 2022. In the first quarter of 2022, the turnover of online retailers continued to grow despite the war in Ukraine. The German Trade Association expects online retail sales to increase by 13.5 percent year-on-year in 2022 as a whole. Despite all the current adversities, the German Trade Association expects retail sales to increase by about three percent in the current financial year². Generally speaking, we still believe that the pandemic has set long-term developments in motion that will open up new possibilities for GK Software as digitalisation and omni-channel retailing have experienced a renewed surge.

Personnel

At the end of 2021, GK Software had 1,096 **employees** on its payroll and currently has **1,090** employees (as of 31 March 2022). The total number for the Group

therefore decreased by 69 compared to the same period in the previous year (Q1 2021 = 1,159).

Segment reporting

In accordance with the new segment reporting, we can report that, in the 1st quarter, all main types of turnover were in part significantly above the same period of the previous year. Software-related turnover increased by 37.3 percent for the Group compared to the same period last year. Due to a significant contract, one particular focus was on the area of licences (+179.2 percent). In addition, platform licences from subscription contracts (+68.1 percent) and licences from platform extensions (extension licences) (+39.2 percent) recorded significant increases. Maintenance income increased by 5.4 percent, whereby it should be noted that in the previous year maintenance revenues were still generated by AWEK microdata GmbH, which has since been sold, and which had to be compensated for this year. We were again able to expand retail consulting in the 1st quarter, meaning that turnover here was 48.2 percent above the previous year's value.

Broken down by the two geographical segments, the increase in Europe was stronger at 33.5 percent than in the Americas at 11.5 percent. The focus of growth in EMEA was on software-related sales and retail consulting. In the Americas segment, growth was

driven by platform licences from subscription contracts, maintenance, and retail consulting.

Assets and financial situation

Compared to the year end for 2021, the Group's liquid funds increased by EUR 12.19 million and now amount to EUR 59.14 million. The total amount of current and non-current bank liabilities decreased further by EUR 2.08 million.

There are no changes to the opportunities and risks for the company as stated in the last Annual Report.

Financial forecast and prospects

The trend for the 2022 financial year so far shows that, in terms of turnover and operating results, the company is completely on track to achieve its forecast for 2022, which predicted a slight increase in turnover and a further increase in profitability towards the EBIT target margin of 15 percent (based on turnover) for the 2023 financial year. This forecast remains unchanged.
