++ Foreword by the Management Board

DEAR SHAREHOLDERS, LADIES AND GENTLEMEN,

In the second quarter of the current 2008 fiscal year, and thus for the third time in a row, SUSS MicroTec Group was once again able to achieve very good order entry at EUR 42.6 million (Q2 2007: EUR 37.5 million). This is all the more gratifying since industry associations had predicted an average decline of -10 percent for the semiconductor equipment market. However, the trend in Group sales, which at EUR 34.4 million remained approximately EUR 2.6 million below the first-quarter amount of the previous year, was not entirely satisfactory. In this context, the order backlog as of June 30, 2008 rose by 42.3 percent to EUR 92.2 million (June 30, 2007: EUR 64.8 million).

The picture for the first half of the year is similarly mixed: while our most important indicator for future developments, order entry of EUR 86.5 million, exceeded the corresponding amount of the previous year (H1 2007: EUR 64.2 million) by 34.7 percent, sales of EUR 69.7 million in the first six months of 2008 fell short of the amount generated in the comparable period of the previous year (H1 2007: EUR 76.4 million).

In half-year comparison, gross profit declined from EUR 34.0 million in 2007 to EUR 27.0 million in 2008, or by 20.6 percent. Reasons for this included lower sales, a less favorable product mix, and the weak US dollar, which together led to a decrease in margins. Against this backdrop, earnings before interest and taxes (EBIT) declined from EUR 6.1 million in the first half of 2007 to EUR 0.5 million in the same period of 2008. Earnings after taxes (EAT) declined year on year from EUR 5.5 million to EUR 0.3 million.

The second quarter of the current fiscal year was marked by two additional significant events: the first three German companies of the SUSS MicroTec Group converted to the new SAP system according to plan on July 1, 2008. In this initial step, a total of eight system modules from financial accounting to product life cycle management were adapted to SUSS MicroTec and successfully implemented within only six months. A major feat when one considers that during introduction, the system had to record and model all Company-specific processes. By consolidating the processes into just one system, programs and ad hoc solutions previously in use were simultaneously discarded.

Dr. Stefan SchneidewindChief Executive Officer

MICHAEL KNOPP
Chief Financial Officer

In addition, on June 19, 2008 the Ordinary Shareholders' Meeting of SUSS MicroTec AG took place in Munich. This represented a historical milestone for the Company as in the course of routine new elections to the Supervisory Board, Dr. Winfried Süss retired from his post as Chairman of the Supervisory Board after more than 50 years of service and commitment to SUSS MicroTec (formerly Karl Süss) as a result of old age, Dr. Franz Richter, Dr. Stefan Reineck, and Mr. Jan Teichert were newly elected.

We would like to take this opportunity to express our very heartfelt thanks to the former members of the Supervisory Board and particularly to Dr. Süss for their many years of consistently positive and constructive collaboration.

The second half of 2008 will most likely be marked by a lower order entry. However, as a result of the large order backlog we are optimistic that we will be able to achieve significant growth in sales in the third and fourth quarters, though particularly the latter. Therefore, we continue to maintain our previous prognosis for 2008. Excluding unforeseen events and extraordinary developments, we assume moderately positive growth contrary to the overall semiconductor trend with sales and a gross profit margin at the level of the previous year. Furthermore, we expect to generate sufficient cash flow from operations to be able to finance the organic growth of the underlying business.

Garching, August 2008

Dr. Stefan Schneidewind Chief Executive Office (CEO) Michael Knopp Chief Financial Officer (CFO)

++ Highlights

SUSS MicroTec Leads Ranking of Top Ten Material Handling Suppliers

In this year's 10 BEST Customer Satisfaction Awards sponsored by VLSI Research Inc., an American market research institute, SUSS MicroTec once again performed well. Customers rated SUSS MicroTec first in the Material Handling Suppliers category for the tenth year in a row – clear proof of the Company's leading position in the area of customer satisfaction. Customers

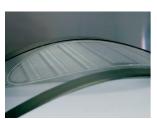

selected SUSS MicroTec as best in Cost of Ownership, Uptime, Build Quality, Usable Throughput, Quality of Result, Product Performance, and Commitment, thus making the Munich-based Company first in seven of the 13 categories. In the Small Suppliers of Wafer Processing category, the high-tech manufacturer based in Garching near Munich ranked fifth, and among the Focused Suppliers of Chip Making Equipment it ranked eighth. The survey's respondents represent approximately 95% of the world's semiconductor market.

SUSS MicroTec Signs License Agreement with Philips Research

SUSS MicroTec has entered a license agreement with Philips Research (Eindhoven, The Netherlands) for a new technology for large-area nanostructure imprinting. Nanoimprint equipment developed within the framework of the Substrate Conformal Imprint Lithography (SCIL) joint project with Philips Research will be adapted to an already existing SUSS MicroTec equipment platform and distributed exclusively by SUSS MicroTec. SCIL represents a new technology for the creation of structures in the sub-50nm range which offers new possibilities for the processing of large-area imprinting applications with outstanding resolution and repeatability. Essentially all Laboratory Mask Aligner from SUSS MicroTec can be modified to process 150mm and 200mm wafers with SCIL technology. The market launch of the SUSS MicroTec lab aligners with integrated SCIL functionality is scheduled for later this year.

World's first 300mm WLR Test System

The newest 200mm Bond Cluster made by SUSS.

SUSS MicroTec Installs World's First 300mm WLR Test System

On April 8, 2008, SUSS MicroTec installed the world's first 300mm wafer-level reliability (WLR) test system at a leading Japanese manufacturer of semiconductor devices. As the technology and design of semiconductor devices advance, the need to test their reliability and gauge their lifetime becomes more acute. With the PM300WLR test system, which was specially developed for reliability tests, the test procedure can be moved to the wafer level and therefore take place before the component's design phase. Thus, the new SUSS MicroTec test system, which is the most intelligent manual probe system now available, substantially contributes to shorter throughput and cost savings as a result of fewer defects at the component level.

MEMS Foundry Selects Newest Bond Cluster from SUSS MicroTec

u-ITC, a world-class supplier specializing in the production of MEMS sensors, will equip its facility in Korea with ABC200, the newest Bond Cluster from SUSS MicroTec. Due to its flexibility, the automatic 200mm Bond Cluster enables the rapid reconfiguration of process parameters from small runs to full production. The state-of-the-art Bonder System from SUSS MicroTec is particularly attractive to suppliers who must respond quickly to their customers' requirements and simultaneously deal with diverse process conditions.

+++ Investor Relations

Shareholders' Meeting Supports Company's Course

On June 19, 2008, the Management Board and Supervisory Board of SUSS MicroTec AG were able to welcome approximately 100 shareholders, bank representatives, and guests to this year's Ordinary Shareholders' Meeting in the offices of the Haus der bayerischen Wirtschaft (House of the Bavarian Economy) in Munich, Germany. In his statement of accounts, Chief Executive Officer Dr. Stefan Schneidewind elaborated on the 2007 fiscal year and discussed the events during the year that impacted business activity. Particular emphasis was placed on the rationale for the adjusted sales and earnings prognosis in October 2007 for the full year as well as the successful market launch of new products.

The questions from shareholder representatives and shareholders in the discussions that followed focused above all on trends of the past fiscal year as well as the strategic direction and outlook of the Group against the backdrop of the new Supervisory Board elections. The Management Board as well as departing and proposed members of the Supervisory Board provided detailed answers to the questions posed.

For the first time in the corporate history of SUSS MicroTec as a listed company, shareholders introduced motions during the 2008 Shareholders' Meeting that sought to table agenda items 8 and 9 as well as to postpone a by-election for the Supervisory Board. All of these motions were defeated in early special votes of the Shareholders' Meeting.

In subsequent voting on the agenda items, a large majority of the shareholders expressed their confidence in the Management Board and the Supervisory Board and discharged both boards. The key resolutions of the Shareholders' Meeting included the reduction in the size of the Supervisory Board from previously six members to three members, as well as new elections for the members of the Supervisory Board. Regarding both points, the Shareholders' Meeting ratified the proposals of the management and elected with a clear majority the recommended candidates Dr. Franz Richter (Chairman), Dr. Stefan Reineck, and Jan Teichert to the Supervisory Board.

	SERVICE	+	+	+	+	+	+	+	+

In doing so, the Munich-based Company came to another historical milestone: in the course of the new elections, Dr. Winfried Süss retired from his post as Chairman of the Supervisory Board after more than 50 years of service and commitment to SUSS MicroTec (formerly Karl Süss) as a result of old age. The Management Board expressed its recognition of his many years of service and his extraordinarily strong commitment to the Company and its gratitude for the support that he consistently provided in difficult times to the formerly family-owned Company, even after it went public.

Additional agenda items which required the approval of the Shareholders' Meeting, included—in addition to the profit and loss transfer agreement with SUSS MicroTec Reman GmbH and a resolution on the suspension and creation of new approved capital—the ratification of a new stock option plan (2008). The only agenda items that failed to obtain the required three-quarters majority were agenda items 8 and 9, which involved the creation of new contingent capital for the issuance of convertible and/or warrant-linked bonds along with other financial instruments.

New Composition of the Supervisory Board

Regarding pending routine elections to the Supervisory Board, two individuals who are very familiar with SUSS MicroTec were nominated as candidates: Dr. Franz Richter and Dr. Stefan Reineck. Dr. Franz Richter (Chairman of the Supervisory Board), who has worked for SUSS MicroTec since 1990, served first as R&D Manager before assuming the position of Chairman of the Management Board from 1998 until the end of 2004. Following a rather long break, he will now assist the Company with his technical expertise and many years of industry experience as an advisor.

Dr. Stefan Reineck (Deputy Chairman of the Supervisory Board) was a member of the Management Board of SUSS MicroTec AG from April 1, 2007 until September 30, 2007. Until Mr. Michael Knopp joined the firm as Chief Financial Officer, the holder of a doctorate in physics was interim responsible for finance, accounting, IT, legal, tax, insurance, and personnel departments and later, strategic planning. Dr. Reineck has belonged to the Supervisory Board of SUSS MicroTec AG since October 2007.

Mr. Jan Teichert ideally complements the Supervisory Board of SUSS MicroTec AG thanks to his extensive financial and capital markets expertise. The business graduate (Diplom-Kaufmann) began his career at a prestigious auditing firm in Munich before moving to the operational side in an international listed company in 1999. Since 2003, Mr. Teichert has been responsible for financial management at Hans Einhell AG, Landau, Germany.

The SUSS MicroTec Share

The SUSS MicroTec share began the 2008 fiscal year at a price of EUR 4.29 and performed well in a persistently difficult market environment. In the first six months of the year, the share outperformed TecDAX, an index of selected German technology stocks, as well as the Prime IG Semiconductor industry index.

Performance of the SUSS MicroTec Share in 2008

Price of the SUSS MicroTec share on January 1, 2008: €4.29

Price of the TecDAX on January 1, 2008: €974.19

Price of the Prime IG Semiconductor on January 1, 2008: €124.17

+++ Consolidated Interim Report

1. Overview of the Course of Business

Decidedly good growth in order entry continued in the second quarter of fiscal year 2008. As in the fourth quarter of 2007 and the first quarter of this year, SUSS MicroTec Group once again was able to achieve very good order entry of \in 42.6 million (Q2 2007: \in 37,5 million; + 13.6%). However, the trend in Group sales, which at \in 34.4 million remained under the result for the corresponding period of last year (\in 37.0 million), was not entirely satisfactory. In this context, the order backlog as of June 30, 2008 rose by 42.3 percent to \in 92.2 million (H1 2007: \in 64.8 million).

The outlook for the first half-year shows a similarly mixed picture: while sales of € 69.7 million in the first six months of 2008 fell short of the amount generated in the same period of the previous year (H1 2007: € 76.4 million), our most important forward-looking indicator – order entry of € 86.5 million – exceeded the previous year's result (H1 2007: € 64.2 million) by 34.7%. Once again, the Lithography division accounted for a substantial share of order growth in the first half of the year as a result of intensified demand for the Lithography division's Mask Aligner and Coater product lines, in particular for advanced packaging and, in the second quarter, MEMS applications.

Gross profit in the first half of the year declined from € 34.0 million in 2007 to € 27.0 million in 2008, or by 20.6%. Reasons for this included lower sales, a less favorable product mix, and the weak US dollar, which together led to lower margins. Against this backdrop, earnings before interest and taxes (EBIT) declined from € 6.1 million in the first half of 2007 to € 0.5 million in the same period of 2008. Earnings after taxes (EAT) declined in six-month comparison from € 5.5 million to € 0.3 million.

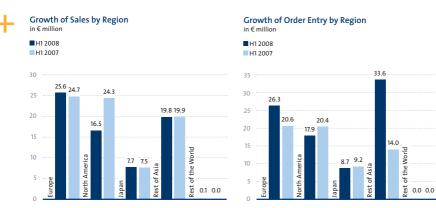

Cash flow from operating activities rose in the first half of the year from € o.o million in 2007 to € 1.0 million in 2008. However, the cash flow from operating activities was not sufficient to cover investments in the first half of 2008. Investments in tangible and intangible assets totaled € 1.3 million (H1 2007: € 0.9 million) and € 5.1 million (H1 2007: € 3.2 million), respectively. The latter included not only expenditures in the previous year for the Group's development projects, but also additional investments in the new SAP ERP System. In addition to securities available for sale of € 7.5 million, SUSS MicroTec Group carries cash and cash equivalents of € 9,9 million (H1 2007: € 15,9 million).

Sales and Order Growth by Region

The distribution of sales by region in the first half of 2008 shows overall stable growth in the regions of Europe with € 25.6 million (H1 2007: € 24.7 million), Japan with € 7.7 million (H1 2007: € 7.5 million), and Rest of Asia with € 19.8 million (H1 2007: € 19.9 million), while North America with € 16.5 million registered a rather significant decrease in sales of approximately 32%. Within the Rest of Asia region, sales declines in China (from € 3.0 million to € 1.5 million) and the other Asia (from € 7.5 million to € 4.3 million) were nearly offset by sales growth in Taiwan (+49.0%).

The distribution of order entry by region indicates significant growth in the regions of Europe (+27.7%) and Rest of Asia (+140.0%). However, Japan (-5.4%) and North America (-12.3%) showed a downturn in orders compared with the previous year.

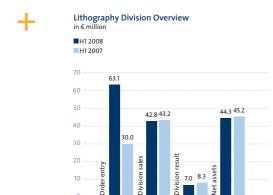

Business Development in the Individual Divisions

Lithography Division

Lithography, the core business of SUSS MicroTec, generated sales of \leqslant 42.8 million in the first six months of the fiscal year, slightly below the previous year's amount of \leqslant 43.2 million.

Order entry in the first half of the year totaled € 63.1 million, exceeding the result of the previous year (H1 2007: € 30.0 million) by approximately 210%. Compared to the first quarter of 2008, in the months from April to June there was intensified demand for Mask Aligner and Coater for MEMS applications along with advanced packaging solutions.

The division result fell in this period by approximately € 1.3 million to € 7.0 million (H1 2007: € 8.3 million). As in the first quarter of 2008, the result was impaired by the higher share of the product mix attributable to the Coater product group, which tends to have lower margins. In the second half of the current fiscal year, the share of the mix comprised of Mask Aligner will increase again sharply, which will have a positive impact on margins.

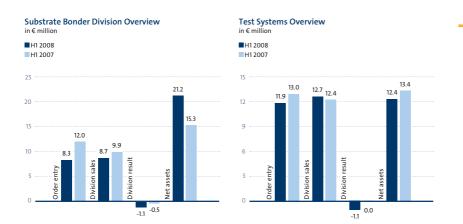

Substrate Bonder Division

The sales of the Substrate Bonder Division reached \in 8.7 million in the first half of 2008, approximately 10% below the previous year's level (H1 2007: \in 9.9 million). Order entry fell compared with the previous half-year by \in 3.7 million to \in 8.3 million. The division of the SUSS MicroTec Group received significant orders among others from the Korean subcontractor u-ITC and a German microsystems technology manufacturer from the pharmaceutical industry.

Test Systems Division

In the first six months of the 2008 fiscal year, the Test Systems division generated sales of € 12.7 million, slightly above the comparable amount for the same period of the previous year (H1 2007: € 12.4 million). However, order entry declined in half-year comparison by € 1.1 million to € 11.9 million (H1 2007: € 13.0 million). The division result of € -1.1 million was significantly worse than in the corresponding period of the previous year (H1 2007: € 0.0 million). The reasons for this were the weaker gross profit margin as a result of sustained margin pressure and the still weak US dollar. In addition, write-downs relating to raw materials, supplies, and consumables in the amount of € 0.2 million put a strain on the division result.

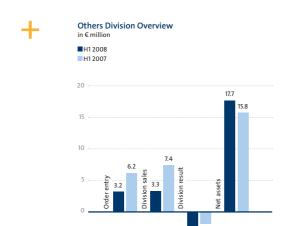

+ SUSS MICROTEC AG INTERIM REPORT 2008 + + + + + +

Others Division

Along with the Photo Mask and Micro-optics business, the Others division encompasses the holding functions and the C4NP product line. Sales and order entry in this division declined in half-year comparison. Order entry sank by \in 3.0 million to \in 3.2 million (H1 2007: \in 6.2 million). Sales in the first six months fell from \in 7.4 million in 2007 to \in 3.3 million in the current fiscal year. The Photo Mask business registered a decline in half-year comparison in both order entry and sales of \in 3.9 million to \in 2.0 million each. The picture was similar for the Micro-optics business: order entry declined to \in 1.0 million (H1 2007: \in 2.3 million) and sales of \in 1.0 million were approximately 55% below the corresponding amount of the previous year (H1 2007: \in 2.2 million).

Device Bonder Division

After the sale of the Device Bonder division in July 2007, sales from the further processing of the remaining order backlog as of the closing date (July 16, 2007) amounted to \in 2.2 million in the first half of 2008 (H1 2007: \in 3.5 million). The division result includes write-downs relating to raw materials, supplies, and consumables of \in 0.2 million.

2. Earnings, Assets, and Financial Position

Earnings Position

In the first half of the year the Group generated sales of \in 69.7 million after \in 76.4 million in the corresponding period of the previous year. Of this decline in sales, \in 4.2 million is attributable to the Mask and Micro-optics business, both of which belong to the Others division. The cause of this sales downturn is a sharply reduced order entry from the respective largest customers of these lines. However, sales in the core divisions of the Company have experienced robust growth, contrary to the current market trend. The Test Systems division was even able to achieve a slight sales increase of \in 0.3 million to \in 12.7 million.

Gross profit, which declined by € 7.0 million over last year for the same period, totaled € 27.0 million in the first half of the year. The gross profit margin was 38.8% (H1 2007: 44.5%) in the first half of the year. Along with overall margin pressure as a result of below-average industry activity, the further weakening of the US dollar and the Japanese yen as well as the product mix were the primary factors contributing to the decline in the gross profit margin. Furthermore, an additional cost adjustment was necessary for the C4NP production equipment to be supplied to IBM.

Development of Inventory and Gross Profit in € million and gross profit margin as a % of sales

- Gross profit margin

Inventory rose from December 31, 2007 by \leqslant 4.4 million to \leqslant 58.2 million as of the first half-year. The buildup in inventory encompasses all divisions of the Group, although the bulk of the buildup occurred for Substrate Bonder. With the successful introduction of the SAP ERP System in the first Group companies, a thorough Group-wide management of inventories will be possible. This will lead to a reduction in inventory over the medium term. The introduction of SAP will be completed in the 2009 fiscal year.

Selling costs of €13.1 million remain stable compared to the same period of the previous year, while administration costs declined by €1.4 million. Beside discontinuation of administration costs due to the sell of Device Bonder business the main factors in the reduction were the capitalization of own work performed by the enterprise in connection with the introduction of SAP in the first Group companies and cost savings.

Development of Overhead Costs in € million and % of sales

-% of sales

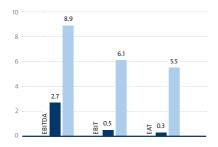

The balance of other operating income and expenses remained almost unchanged over the previous year and primarily contained recognized losses from operating activities and unrecognized losses from the valuation of open foreign exchange positions as of the closing date.

Tax expense rose over that of the previous year's period on a relative basis as no revaluations are expected during the current fiscal year on previously adjusted deferred tax assets, which have had a favorable effect on the income tax rate in prior years.

Despite the difficult market environment in the semiconductor equipment industry, in the end the Group was able to conclude the first half of the 2008 fiscal year with positive earnings after taxes of \leqslant 0.3 million, although this result fell substantially short of the \leqslant 5.5 million for the comparison period of the previous year.

Development of Significant Performance Figures in € million

Financial Position and Net Assets

In the first half of the fiscal year, the net cash position – the balance of cash and cash equivalents, securities, and financial liabilities – totaled \in 3.5 million. Compared to December 31, 2007 this means a decrease of \in 4.1 million. While financial liabilities rose only slightly in comparison, the sum of cash and cash equivalents and securities declined from \in 20.1 million as of December 31, 2007 to \in 17.4 million.

In the first half of the current fiscal year, the Group was not able to cover its investments through cash flows from operating activities. Investments of \in 6.4 million, excluding net payments for the acquisition of securities of \in 7.5 million (H1 2007: \in 0.0 million), were offset by cash flows from operating activities of only \in 1.0 million (H1 2007: \in 0.0 million).

The majority of the investments totaling € 5.1 million (H1 2007: € 3.2 million) concerned intangible assets. Along with investments in Group development projects in the Substrate Bonder of € 1.1 million (H1 2007: € 1.5 million) and C4NP segments of € 0.7 million (H1 2007: € 0.0 million), additional investments of € 1.7 million (H1 2007: € 0.0 million) were made in the new SAP ERP software in the first half of the year.

In addition to the sum of cash and cash equivalents and securities, as of the half-year balance sheet date the Group has credit lines of approximately \in 17.6 million at its disposal, the majority of which are secured in line with common banking practice and subject to financial covenants. As of the balance sheet date, the credit line has been utilized in the amount of \in 3.8 million by the subsidiary in Japan to take advantage of arbitrage gains. Thus, the Group has sufficient financial resources to finance operating activities.

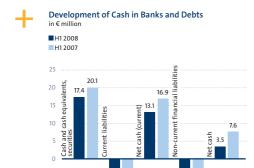

Besides goodwill, non-current assets consist primarily of capitalized development activities. The C4NP project, for which total development activities of € 8.5 million (December 31, 2007: € 7.8 million) were capitalized as of the balance sheet date, represents the largest individual item. With the delivery of the first high-volume tool from the C4NP line to development partner IBM in the second quarter of the fiscal year, the development phase for the C4NP project has thus ended. Accordingly, no further development costs will be capitalized. Instead, the capitalized development activities will be amortized on a straight line basis over their expected useful life beginning in the third quarter.

The greatest changes in the area of current assets occurred within working capital: while accounts receivable of \leq 25.6 million as of December 31, 2007 declined to \leq 20.2 million as of the half-year, inventory reserves of \leq 53.8 million rose to \leq 58.2 million. The majority of this increase related to raw materials, supplies, and commodities. The reduction in other financial assets from \leq 3.0 million to \leq 1.4 million resulted primarily from the influx of other purchase price proceeds from the sale of the Device Bonder division in the previous year.

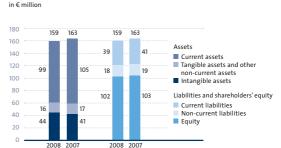

In the area of current liabilities, the greatest change since December 31, 2007 involved accounts payable, which decreased from € 8.8 million to € 5.7 million. This decline was closely linked to the introduction of SAP at the first Group companies. Beforehand, as many outstanding vendor bills as possible were settled in order to reduce potential risks associated with a delayed introduction and to simplify balance transfers.

As a result of balance sheet shortening and only slightly lower equity as of the balance sheet date, the equity ratio rose from 62.9% as of December 31, 2007 to 63.8% as of the half-year balance sheet date.

Consolidated Balance Sheet Structure

+ SUSS MICROTEC AG INTERIM REPORT 2008 + + + + + +

Investments

Reflecting the structure of the Company, investments in tangible assets are insignificant. Accordingly, investments in tangible assets in the first half of the year came to only €1.3 million (H1 2007: €0.9 million). However, investments in intangible assets climbed sharply compared to the same period of the previous year. Along with expenditures – also made in the previous year – for the Group's development projects in the Substrate Bonder and C4NP segments, investments were also made in the new SAP ERP System. In addition, in the first half of the year SUSS MicroTec AG used excess liquidity as of December 31, 2007 to purchase corporate bonds worth €10.5 million (H1 2007: €0.0 million), of which €3.0 million had already been sold by the balance sheet date

Employees in the Group

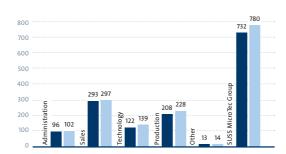

In the first half of the 2008 fiscal year, the Group's individual companies had an average of 732 employees (H1 2007: 770 employees). This decline resulted from the sale of the Device Bonder division in July 2007. As of the half-year balance sheet date, the employees were distributed among various divisions as follows:

Development of Staff Numbers by division

3. Report on risks and opportunities

Worldwide high-tech business activity gives rise to general and current risks for the Company. The Management Board has put appropriate measures into place to monitor risks in order to identify in good time trends that constitute a threat to the SUSS MicroTec Group's continued existence.

A distinction is made in risk monitoring between general economic risks and industry and operating risks.

General economic risks and industry risks

The Company has identified as general economic risks underlying political conditions, prices of energy and raw materials, cyclical market fluctuations and market development, market positioning and dependence on individual know-how holders. These risks were outlined in the risk report in the Company's Annual Report for 2007.

No fundamental changes in the risks and opportunities described in the latest Annual Report occurred in the first half of the current fiscal year.

Operating risks

The SUSS MicroTec Group sees operating risks as the repercussions on the assets and earnings position of any write-downs in the consolidated balance sheet made necessary by new technological developments by the competition. Other operating risks are price pressure and exchange rate developments, access to capital borrowing and interest-rate risks along with legal risks, especially liability. The last Annual Report included detailed statements on all of these points.

With one exception no fundamental changes to risks and opportunities in connection with operating risks occurred in the first half of 2008. As stated in the last Annual Report, new technological developments by the competition could make parts of the product portfolio and with them part of the Group's future earnings potential obsolete if new technologies were to offer faster, more efficient or less expensive solutions to the same problem. This risk could, especially in the valuation of capitalized development work, make unscheduled value adjustments necessary in

the course of future impairment tests. In the first half of 2008 the net book value of capitalized development costs increased by \in 1.9 million (previous year: \in 1.4 million). Thereof a portion of \in 0.7 million is represented by the C4NP project.

Overall risk

In the first half of fiscal year 2008 no risks were identified in the Group that posed a threat to its continued existence as a going concern. It was at no time under threat in respect of either substance or liquidity.

Risk management system

The risk management system outlined in the Annual Report for 2007 was used unchanged in the first half of 2008

4. Supplementary Report

There were no significant events subject to reporting requirements after the close of the interim reporting period.

5. Report on significant business with related parties

For material business with related parties please see the relevant section in the Selected Explanatory Notes to SUSS MicroTec AG's Interim Report as of June 30, 2008 (Note 12).

6. Prognosis Report

Both exogenous and endogenous factors will influence SUSS MicroTec's performance in the second half of 2008 and beyond. In this prognosis report, we will briefly explain the factors that we as well as leading industry observers see as vital to the success of our Company.

Trend in the Semiconductor Industry

At the beginning of 2008, the growth forecasts of five leading market research institutes for the chip industry averaged 8%. At the end of July 2008, the British market research company Future Horizon Ltd. confirmed average annual growth in 2008 of between 7 and 10%. While in 2007, strong growth in the supply of memory chip components was accompanied by a sharp decline in price, Future Horizon und IC Insights are already pointing to indications of a resumption of rising chip prices. The basis for this assumption is the sustained high capacity utilization rate at fabrication plants of more than 90% in the first half of 2008.

Trend in the Semiconductor Equipment Industry

In the opinion of the leading market research institutes, however, the fundamentally positive mood of the chip industry in 2008 will not affect the readiness to invest in equipment. On the occasion of the SEMICON West trade fair in San Francisco, USA, the SEMI industry association confirmed its estimate that the semiconductor equipment market would shrink by approximately 20% in 2008.

While a decline of approximately 20% is anticipated in wafer processing, the packaging and assembling segment relevant to us is expected to experience an approximately 14% decline in comparison with last year. Based on constantly rising wafer fab utilization since 2007, however, industry experts expect much higher investment readiness for equipment in 2009 and 2010 with average annual growth of 13 and 6%, respectively.

Expected Development in the Major Markets

As an innovative, specialized equipment manufacturer, SUSS MicroTec has focused primarily on the major markets of microsystems technology (MEMS), advanced packaging, and compound semiconductors.

Expected developments and forecasts in the major markets are discussed in detail on pages 66 to 68 of the 2007 Annual Report. As of mid-2008, no significant changes have been made to estimates regarding the expected development of the major markets. We therefore refer the reader to the discussions in the prognosis report contained in the 2007 Annual Report.

Endogenous Indicators

Along with the condition of the markets, the innovative potential of our product lines is critical to our success. In the first half of 2008, our new developments for 3D integration, wafer level redistribution, nanoimprinting, and other applications have already attracted the interest of chip manufacturers. We are therefore very confident that these new processes will be gradually integrated into manufacturing.

Statement on the Projected Development of the Group

Although industry associations and research institutes in the semiconductor industry are making negative forecasts for 2008 and do not foresee a market revival until 2009, SUSS MicroTec has been able to generate very good order entry for three quarters in a row. Therefore, we are maintaining our prognosis for 2008. Excluding unforeseen events and extraordinary developments, we assume moderately positive growth contrary to the overall semiconductor trend with sales and a gross profit margin at the level of the previous year. Furthermore, we expect to generate sufficient cash flow from operations to be able to finance the organic growth of the underlying business.

Forward-looking Statements

This interim report contains information and prognoses that refer to the future development of the SUSS MicroTec Group and its companies. The prognoses represent estimations that we have made based on all of the information available to us at the present time. If the assumptions underlying these prognoses do not occur or if risks – as addressed in the risk report – do arise, the actual results may deviate from the results expected at present.

+ + + Selected Explanatory Notes

to the Interim Report of SUSS MicroTec AG as of June 30, 2008

1. General accounting policies

The consolidated financial statements of SUSS MicroTec AG as of December 31, 2007 were prepared in accordance with International Financial Reporting Standards (IFRSs) issued by the International Accounting Standards Board (IASB) and valid as of the balance sheet date. The interim Group financial statements as of June 30, 2008, which have been prepared in accordance with International Accounting Standard (IAS) 34 "Interim Financial Reporting", have been drawn up using the same accounting methods as in the 2007 Group financial statements.

All interpretations of the International Financial Reporting Interpretations Committee (IFRIC), which are mandatory as of June 30, 2008 have also been applied.

For additional information on the individual accounting methods applied, please refer to the consolidated financial statements of SUSS MicroTec AG as of December 31, 2007.

The interim financial statements were neither audited by the group's auditors, KPMG Deutsche Treuhand-Gesellschaft, Aktiengesellschaft, Wirtschaftsprüfungsgesellschaft, nor did they undergo an auditing review.

All amounts are indicated in thousands of euros (T€) unless otherwise noted.

2. Changes in the Group structure

The financial statements of SUSS MicroTec AG and all of the major companies for which there is a group control option according to the control principle, irrespective of the level of participating interest, are included in the consolidated financial statements. With respect to the consolidated financial statements as of December 31, 2007, there were no changes within the consolidated group.

3. Discontinued operations "Device Bonder"

By purchase contract dated 16 July 2007, SUSS MicroTec AG sold its business with Device Bonders. Under an asset deal, all material assets and liabilities of the Device Bonder business of Suss MicroTec S.A.S. were sold. Parties to the purchase contract agreed, that Suss MicroTec S.A.S. is entitled to realize the backlog of Device Bonders as existing at Closing. Out of this realisation the Group generated revenues of 0.8 Mio. € in the first quarter, that is shown under "Discontinued operations" in the Consolidated Income Statement.

SUSS MicroTec AG expects the complete realisation of the existing Device Bonder backlog latest until the end of the third quarter of 2008.

FOREWORD + + + + + +

4. Reportable matters

In the first quarter, SUSS MicroTec AG purchased available for sale securities for about €7.5 million using its liquidity surplus as at 31 December 2007. The securities concerned are corporate bonds bearing variable interest linked to EURIBOR. The securities purchased are all from corporations with an investment grade rating. The securities have been measured at fair value. Any fluctuations in the market price are recorded under equity in accumulated other comprehensive income and therefore do not affect profit and loss.

As in the last quarter of the prior year, SUSS MicroTec AG converted further portions of its intragroup foreign currency loans to Suss MicroTec Inc. into loans with an indefinite term. In accordance with IAS 21, instead of presenting the effects from the measurement as at the balance sheet date in the income statement, the company now presents them in accumulated other comprehensive income. Furthermore, SUSS MicroTec AG has converted a portion of the existing indeterminate loan to Suss MicroTec Inc. into equity. The debt-/equity-ratio is such as to optimise the tax deductibility of the interest expense at this company.

By contract dated 8 May 2008, SUSS MicroTec AG contributed its 100% interest in Image Technology Inc. to SUSS MicroTec Inc., whose sole shareholder is also SUSS MicroTec AG. The background to this transaction is the further optimisation of Group's tax structure. The direct participation of SUSS MicroTec Inc. in Image Technology Inc. created the precondition for a tax-consolidated Group in the USA. As a result, the taxable income of Image Technology Inc. for purposes of Federal Tax, that represents the major part of the tax payable, is attributed to SUSS MicroTec Inc.

There were in the interim reporting period no other events or matters affecting assets, debts, equity, period result or cash flow that were unusual in terms of their nature, extent or frequency.

5. Change in presentation

Differently to the treatment in the consolidated financial statements as at 31 December 2007, SUSS MicroTec AG has adjusted the presentation of the employee numbers in the segment reporting. In the present interim reporting period the employees in the Group's administrative areas have been allocated for the first time to the segment for which they are mostly active. Previously these employees had been allocated to the segment "Other". The presentation in the corresponding prior year period has been adjusted.

As a further change in the segment reporting, an adjustment has been made in the determination of the segment result, which now also contains income and expenses from the translation of foreign currency and from disposals of assets. Both effects on results have been allocated to the segment, that determined these effects. In total, the results of the segments now correspond to the operating result, i.e. EBIT, of the Group. Here, too, the presentation of the corresponding prior year period has been adjusted.

6. Revision of estimates

If estimates were made within the scope of the interim reporting, they shall remain essentially unchanged in methodology within the fiscal year and in the fiscal year comparison.

In contrast to the method of approach at year-end, the income tax expense in each interim reporting period is recorded on the basis of the best estimate of the weighted average annual income tax rate expected for the entire fiscal year.

SUSS MicroTec AG currently assumes that the annual income tax rate it will pay will be in the order of magnitude of the expected income tax rate of about 28%. The revaluation effects on previously adjusted deferred tax assets that had a favourable effect on the income tax rate in prior years are not expected to recur in the reporting year.

Furthermore, there were no changes subject to reporting requirements that have a significant impact on the current interim reporting period.

7. Debenture bonds or equity securities

No issues, buybacks or repayments were effected during the reporting period, either for debenture bonds or for other equity securities.

8. Dividends paid

No dividends were paid out or proposed for disbursement during the reporting period.

9. Significant events after the close of the interim reporting period

There were no significant events subject to reporting requirements after the close of the interim reporting period.

10. Contingent liabilities and contingent claims

There are no contingent claims. There were no significant changes in contingent liabilities with respect to the reporting time frame of December 31, 2007.

11. Earnings per share

The undiluted earnings per share are determined by dividing the net income for the period accruing to the shares (after minority interests) by the average number of shares.

To determine the diluted earnings per share, the profit for the period to be attributed to the shareholders (after minority interests), as well as the weighted average of the shares in circulation, must be adjusted for the effects of all potentially diluting shares.

12. Related parties

In the first half of the financial year 2007, the Group was affected by the disclosure obligations under IAS 24 "Related party disclosures" with respect to business relationships entertained with members of the supervisory board of SUSS MicroTec AG and members of their immediate families.

12.1 SÜSS Grundstücksverwaltungsgesellschaft GbR and Hunger Mountains

Various group companies (Suss MicroTec Lithography GmbH, Suss MicroTec Test Systems GmbH, Suss MicroTec Inc.) rent their premises from Süss Grundstücksverwaltungs GbR or Grundstücksgesellschaft Hungar Mountains, USA. In the first half of the year, total rental payments of T€889 (6M 2007: T€898) were made.

12.2 The Süss family

In the first half of 2008, payments totalling T€237 (6M: T€221) were made to the Süss family in the form of salaries and pensions.

12.3 Peter Heinz

Mr Peter Heinz, who was a member of the supervisory board until 19 Juni 2008, has since 2007 been a member of the board of Image Technology Inc., a 100% subsidiary of Süss MicroTec AG. Mr Heinz receives an annual remuneration of T€ 7 for his activity.
